

Sierpe River

Enjoy one of the most exciting eco tours on the majestic Sierpe River in Costa Rica . Sierpe is not your average river, it's big with calm waters and deep green in color, and is surrounded by a variety of unique ecosystems.

The Sierpe has areas of flooding on a regular basis and so the Mangroves are abundant all around the river. The Mangroves are a common trait of this area, with a root system that leaves the water and is protected from damage and being washed away, as they have adapted to their environment and there are many Lilies that adapt to grow in the semi flooded waters.

The Sierpe Mangrove come with an animal and plant system the will give you a true eco touristic experience , where you'll see crocodiles, alligators, birds such as the Fishing Heron, Potóo, and small mammals such as Sloughs, White face, Congo and Titi Monkeys, and Racoons, among many others.

On the ecological tour of the Sierpe river you will have the opportunity to see one of the most now considered valuable eco systems, the Mangrove, an eco system that will permit you to get close to a different type of nature in all its splendor, and allow you to see a variety of unique life forms that have adapted to this semi flooded environment.

The waters of the Sierpe river are full of aquatic life, among them being the Herons that are always near the shore camouflaged in with the water lilies, looking for a small fish. You will also come across such fish as sea bass, red snook, grouper, jurel, rooster fish and many more. The ecological adventure will certainly begin with the Sierpe river tour, a tour full of natural life! And with the exploration of another world, an eco system that's unique and full of wild life and water life.

The tour lasts 2 hours. It's guided by an experienced bi lingual Ecologist that is from the area, who will give you thorough information so that you can take full advantage of your visit to the Sierpe river in Costa Rica .
